

TM150. Enrich your farming.

TM150. Boost your crop yield.

The need for higher productivity in the world agricultural industry drives the professional and extensive use of modern sprayers. New generations of fertilizers and self-propelled high powered sprayers require a significant upgrade in tire technology to cope with new, high demand applications, through high load, stability and reduced fuel consumption.

Performance for farmers, care for the environment

On the sidewall of the tire, the **BLUE TIRE** logo represents the improvements, patents and production procedures that the TM150 tire manufacturing process has been through in order to guarantee performance for farming and care for the environment.

-6%
CO₂
EMISSIONS

The **BLUE TIRE TECHNOLOGY** allows up to a 6% CO₂ emissions reduction compared to standard tire technology.

The TM150 tire has been designed according to the **BLUE TIRE TECHNOLOGY** which includes:

- 🌿 new eco-friendly materials
- 🌿 advanced tread and bead concepts
- 🌿 new sidewall designs

Printed on
recycled paper

Advanced tread design

The TM150 tire tread pattern allows you to work in very difficult conditions, with excellent lateral stability and great road comfort and handling,

even at high speeds (D rated 65 km/h). The product line can be fitted on several different rim dimensions, saving you both time and money.

Tire TREAD KEY FEATURES

Overlapped lugs to prevent stubble damages

Sharp lug head to increase grip

Interlug terraces to boost self cleaning capacity

Large and round shoulder-base to increase stability of the vehicle when the booms are extended

Wide lugs to guarantee stiffness when the machine is operating under high load

Maximum load capacity

The TM150 tire features a high load capacity, which is crucial in maximising a sprayer's performance.

The graphic below shows the relative higher capability of the TM150 tire compared to the standard series tire:

+37% vs. Standard Tire at 4,4 bar
+68% vs. Standard Tire at 3,2 bar

LOAD CAPACITY Reference size: VF 380/90R46

TM150 VF - 4,4 bar

Standard Tire - 4,4 bar

Standard Tire - 3,2 bar

Wide footprint

The VF 380/90R46 is able to carry up to 40% more load or it can be deflated by up to 40% whilst carrying the same load. The TM150 tire is the right choice to minimise ruts and

decrease soil compaction. The advanced tread design ensures a 5 - 8% wider footprint than other standard tires, a great benefit for increasing crop yields.

SOIL COMPACTION PERFORMANCE

Standard Tire

TM150

- Very High Compaction
- High Compaction
- Medium Compaction
- Low Compaction
- Very Low Compaction
- Zero Compaction

Going deeper in the soil, the degree of compaction gets rapidly worse with the standard tire. At a 20 cm depth, the TM150 tire drives to “low” compaction while the standard tire is already at “medium” compaction.
